# Week in Review

How did you commute to work this morning? Google's self-driving car prototype unveiled this week may soon change your answer. Google is hoping that, within the next decade, these cars may alleviate the most miserable part of the day for many Americans – their drive to and from work. Not only must Google win over American drivers, however, it also must woo the regulators in all 50 states. With only three states having laws on the books that permit some version of autonomous vehicles on their roadways, these cars are likely to require legal changes in addition to changes to the rules of the road.
