# What You Need to Know About PFAS Remediation in 2021

2021 was already looking like a big regulatory year for PFAS – per- and polyfluoroalkyl substances used for decades in everything from nonstick cookware to stain-resistant fabrics. But 2020's final weeks point to a particular focus when it comes to the so-called “forever chemicals” – as well as tricky questions related to PFAS remediation.

PFAS efforts have gained traction for years across the country and continue to do so. More local governments will likely ask for PFAS information in permitting in the months and years ahead. Individual companies, meanwhile, must review their wastewater for PFAS while simultaneously getting their houses in order when it comes to insurance policies — if they want to effectively garner recovery down the line.
