

Privacy and Cybersecurity Risk Management: A How-to for Businesses (St. Cloud)

October 24, 2017

Firm Event

Gray Plant Mooty - St. Cloud

1010 W. St. Germain

First Floor Atrium

St. Cloud, MN 56301

Malware and cyber-attacks continue to threaten businesses of all sizes. Malware, phishing, CEO fraud and vendor risk have made businesses and their assets more vulnerable than ever. Increasingly employees represent one of the largest security risks. The inadvertent disclosure of information can help cyber thieves empty bank accounts in seconds.

Businesses need to understand how to proactively manage the risks to their confidential data and financial well-being. This event will highlight some of the current methods employed by cyber criminals, the threats these attacks present to businesses and how to help mitigate the risks.

Please join us for a lively discussion facilitated by Gray Plant Mooty attorneys George Meinz and Aaron Crandall. Topics to be covered include:

- An overview of the current cyber threat landscape
- A discussion of financial security threats
- The importance of third party risk management
- Making your employees a key part of your security program
