2021 marks the 10th anniversary of the firm's Boston office. Our Boston team provides sophisticated intellectual property services, particularly in the life sciences area. The Lathrop GPM team assists clients with a wide range of IP, including antibodies and immunotherapies, biologics, gene therapy, medical devices, therapeutics involving RNAi/siRNA/miRNAs, peptide therapeutics/chemistry, prodrugs and small molecule advancements.

Our attorneys hold advanced scientific degrees and are among Chambers USA's "Leading Lawyers" for Massachusetts IP. The Boston team has expanded during the past decade to now include nearly 30 attorneys, patent agents and technical specialists who have deep and focused experience in biotechnology, chemistry, high technology, patent litigation and licensing. Clients also benefit from the breadth and depth of a national law firm with attorneys from a variety of practice areas located in offices from coast to coast.

Our Boston office is positioned in the city's downtown core.
